

PBMC5 + Other: recorded diffusion states

PBISC-Diffusion ctx2048 E12 EMA | 2,980 common genes | fixed observed-reference projections and axes

Fixed final predicted labels are carried backward. Final clean prediction repeats at the endpoint.

● T cell ● B cell ● Monocyte ● NK cell ● DC ● Other

Gray: observed real cells (same conditioning donor). This visual comparison is not independent validation.

Denoising is not biological time. Early UMAP positions may be out of distribution.
